**Teaching Aid Package to Accompany Pervin: Personality**

"how a man rallies to life's challenges and weatheres its storms tells everything of who he is and all that he is likely to become." —St. Augustine

It has long been understood that how a person adjusts to life stresses is a major component of his or her ability to lead a fulfilling life. Yet it wasn't until the 1960s that coping became a discrete topic of psychological inquiry. Since then, coping has risen to a position of prominence in the modern psychological discourse—especially within the personality, cognitive, and behavioral spheres—and, within the past decade alone, many important discoveries have been made about its mechanisms and functioning, and its role in ongoing psychological and physical health and well-being. A book whose time has come at last, the Handbook of Coping is the first professional reference devoted exclusively to the psychology of coping. Reporting the observations and insights of nearly sixty leading authorities in stress and coping from a wide range of affiliations and schools of thought, it brings readers the state of the art in coping theory, research, assessment, and applications. In orchestrating the book, the editors have scrupulously avoided imposing any particular slant or point of view, other than the need to foster greater eclecticism and cooperation between researchers and clinicians concerned with the phenomenon of coping. The Handbook of Coping is divided into five overlapping parts, the first of which serves to lay the conceptual foundations of all that follows. It traces the history of coping from its origins in psychoanalytic theories of unconscious defense mechanisms, and provides an exhaustive review of the latest conceptualizations, models, and constructs. The following section provides an in-depth exploration of current research methodology, measurement, and assessment tools. Part Three explores key facets of coping in a broad range of specific domains, including everyday hassles, chronic disease, cataclysmic events, and many others. The penultimate section focuses on individual differences. Among important topics covered here are coping styles and dispositions; the role of family, social support, and education; and coping behaviors across the life span. The final section, Part Five, is devoted to current applications. Clinical parameters are defined and a number of specific interventions are described, as are proven techniques for helping clients to improve their coping skills. A comprehensive guide to contemporary coping theory, research, and applications, the Handbook of Coping is an indispensable resource for practitioners, researchers, students, and educators in psychology, the health sciences, and epidemiology. Of related interest EGO DEFENSES: Theory and Measurement —Edited by Hope R. Conte and Robert Plutchik This book explores the nature and manifestations of defense mechanisms and traces ego defense theory and research from Freud's initial conceptualization through recent work in object-relations theory and other psychoanalytically oriented approaches. It provides clinical guidelines for diagnosing, assessing, and dealing with defenses, reviews empirical research techniques, and indicates their value in development and in psychotherapy. This volume should be of value to theoreticians, clinicians, and researchers interested in finding appropriate tools for measurement of defense mechanisms. 1994 SOCIAL SUPPORT: An Interactive View —Edited by Barbara R. Sarason, Irwin G. Sarason, and Gregory R. Pierce The study of social support and its relationship to personality, health, and adjustment is one of the fastest growing areas of research and application in psychology. This book contains integrative surveys of clinical and field studies, experimental investigations, and life-span explorations. It approaches social support as an important facet of interpersonal relationships and shows its undesirable, as well as its positive, features. 1990 (0-471-60624-3) 528 pp.

Theories of Personality

The Development of Defense Mechanisms

The idea that the human mind—that faculty of the intellect which we use to define and discern the truth—might also be used to deceive itself is not new. The classic orator Demosthenes warned of this possibility in 349 B.C. when he wrote that "Nothing is more easy than to deceive one's self; what a man wishes he generally believes to be true." 1 Even Jean Jacques Rousseau, who suggested the possibility of man as "noble savage," alerts us to this paradox, when he writes "Jamais fa nature ne nous trompe; c'est toujours nous qui nous trompons" ("Nature never deceives us; it is always we who deceive ourselves"). 2 But it was Sigmund Freud who placed this idea firmly into the field of psychopathology and then, later, into a general psychological theory. According to Freud, understanding the function of a defense mechanism means not only fathoming the origin of pathological symptoms but also comprehending a model of the mind that includes both conscious and unconscious mental processes. From this initial focus on the general process of defense, Freud and his followers went on to identify various forms this process might take, with the result that today we have a list of 3 more than 37 defense mechanisms described in the literature.

Personality Theories: Critical Perspectives is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

**MPC-003: PERSONALITY: THEORIES AND ASSESSMENT**

The DSM-5 promises to be a major reformation of psychopathology, and no section is likely to change diagnostic practice more than that of personality pathology. Unlike the DSM-IV, the DSM-5 personality disorders will be conceptualized as involving core deficits in interpersonal and self-functioning, and will utilize a hybrid assessment model involving both pathological trait dimensions and a limited set of personality disorder types. These changes are based on empirical and theoretical work conducted during the era of DSM-III/IV, but nevertheless there is significant disagreement among personality assessors regarding the DSM-5 proposal. In this volume, several members of the DSM-5 work group offer rationales for the proposal and offer empirical evidence regarding suggested changes, and several personality assessment researchers critique the proposal and offer alternative conceptualizations. This book was originally published as a special issue of the Journal of Personality Assessment.

This book serves as an up-to-date Rorschach primer and elaborates on the various applications of Rorschach assessment for adolescents with respect to differential diagnosis, forensic consultation, and therapeutic assessment. It opens with three chapters that provide readers with a basic overview and introduction to the topics integrated throughout the text. The first reviews the development and foundations of the Rorschach Inkblot Method; the second discusses key issues in the assessment of adolescents, with particular attention to differentiating patterns of psychopathology from normal developmental variations; and the third presents general considerations in using performance-based assessment instruments in the assessment of personality functioning in adolescence. Later chapters explore the current status of the Rorschach Inkblot Method with respect to theoretical formulations, research findings, and practice guidelines. The final chapter draws on information in the preceding chapters to present a model for Rorschach assessment of adolescents. This model is designed to facilitate accurate and useful formulations of personality functioning that contribute substantially to advancing responsible adolescent development.
